

ESCOP Priorities

Support increased appropriations for USDA-NIFA to enhance capacity funding for research, Extension and education and fully-fund the AFRI competitive grants program

Support strategic realignment of NIFA funding lines

Develop new funding opportunities to address Critical Infrastructure for Colleges of Agriculture at Land-grant Universities

Assess the CMC's Strategic Communications Roadmap Plan, and subsequently adopt and implement a strategic plan for communications and marketing

Strengthen strategic partnerships with traditional and nontraditional entities

Implement regional research among universities/institutions to address the USDA Science Blueprint

Chair's Initiatives

Fully integrate Diversity, Equity and Inclusion as an essential component of all our programs.

Improve collaborations across 1862, 1890 and 1994 land grant colleges and universities and among federal agencies and allied groups.

Support supplemental funding for Critical Infrastructure for Colleges of Agriculture at Land-grant Universities.

Support COVID-19 related supplemental funding for food and agricultural research relief and recovery.

Strengthen partnership and engagement efforts with NIFA, including: Project CAFÉ' (Collaboratively Achieving Functional Excellence), the Research Working Group, and other items that may arise.

Improve the organizational readiness and strategic capacity to deal with the next major crisis.

AGRICULTURAL EXPERIMENT STATIONS

A System to Address Challenges in Food and Agriculture

Our food and agricultural systems face complex challenges as the physical environment and human societies change. Public investment in research and development is key to increasing agricultural productivity, food safety and security, community resilience, environmental stewardship, and economic growth. As part of the Land-grant University system, and with the support of USDA funding, Agricultural Experiment Stations (AES) and agricultural research programs at universities and historically black and tribal colleges are uniquely positioned to improve natural resources, food and agricultural systems.

WHAT MAKES AES UNIQUE?

Institutions in all 50 states and many U.S. territories with research sites representing diverse ecosystems, communities, and food production systems

A family of land-grant universities directs research that reflects a diverse U.S. population and varied needs

Laboratories, greenhouses, computational centers, equipment, and tools focused on improving the food supply and protecting the environment

Skilled scientists, educators, students, and staff working in fundamental and applied research fields

Impartial, verified science, technology, and recommendations

THE POWER OF PARTNERSHIPS

Federal and state funding allows AES to mobilize scientists to respond quickly to local issues

Multistate projects bring together scientists from AES across the country to tackle regional and national issues, creating state synergy, reducing duplication, and leveraging funds, facilities, and other resources

A close relationship with Extension and educators creates a feedback loop from research to application

Strong relationships with government agencies, farm and commodity groups, and the private sector transform innovations into economic development and business opportunities

WHAT DO AES NEED NOW?

With enhanced support, AES and agricultural research programs at universities and historically black and tribal colleges can continue to address challenges in food and agriculture more efficiently than any other system in the world. Filling current gaps and needs will require:

Enhanced funding to support diverse research, enable exploratory and early-career projects, and give AES the flexibility to respond to emerging issues

Resources to improve campus infrastructure and facilities for cutting-edge research

Interdisciplinary, systems-level research

Broader focus on sustainability and wellness

Models and decision-making tools that account for interlinked variables and uncertainty

Harnessing advances in big data, genetics, nanotechnology, and other emerging fields

Strategies for communicating information and sharing technology

Experiment Station Committee on Organization and Policy (ESCOP)
