

# National Plant Germplasm Coordinating Committee Meeting Notes

June 19, 2012

**Present:** Lee Sommers, Jerry Arkin, Ed Knipling, Ed Kaleikau, David Baltensperger, Joe Colletti, Gary Pederson, Dan Upchurch, Peter Bretting, Ann Marie Thro, Thomas Burr, Tim Cupka, Eric Young, and Kay Simmons

## 1. Ed Knipling

- NGRAC re established officially in April, first meeting this summer or fall
  - NPGCC connected through Peter and Gary as ex-officio members
  - Scope is on all life forms
  - Focus on plants because motivation for establishing it is deregulation of GMO alfalfa
  - Council will be standing subcommittee of NAREEA Board
  - Forum for coordination and stakeholder input as well as advisory to Secretary
- NPGS remains a core program of ARS
- Global food security is high priority for government and germplasm is key
- ARS budget - 7-8% reduction over past two years
- Genetic resources program has been mostly protected from cuts
- Closing 10 locations this year due to cuts, Palmer, AK is only germplasm facility and it's being moved to Pullman & Corvallis
- FY'13 budget so far looks flat
- Senate Ag Committee has asked GAO to assess how well ARS and NIFA are coordinating with each other and avoiding duplication. NPGCC is great example
- Chavondra Jacobs-Young is new Associate Admin for National Programs
- Is there a change in focus of breeding? Some shift to nutrition traits and biotic/abiotic stress resistance, but yield is still high priority.
  - In private sector big push is toward crop stability through stress resistance, particularly through national tolerance rather than GMO.
- Free exchange of international germplasm and data sharing is high priority of administration

## 2. Peter Bretting

- [PowerPoint](#)

- 5-year retrospective review for 2006-2011 has been completed and reports are on web at link in PowerPoint
- Review panel met only virtually on conference call
  - Advantage - able to have international members
  - Disadvantage - less informed interaction and hard to schedule across time zones
- Major observations and recommendations relative to NPGS are in PowerPoint
- Commented that NPGS needs to do a customer satisfaction survey but OMB regulations on surveys are very complicated so haven't done one
- New Action Plan for national program 301 has been developed and is on ARS website
  - Covers 2013-2017
  - NPGS includes microbial collections
- NPGS would like to obtain microbial collections from retiring scientists if that collection is not going to be maintained by university
- Still negotiating with APHIS to reduce cost of phytosanitary certificates for exported samples
- Possibility of making requestor pay this fee
- Dutch genebank is looking into charging a 50 Euro fee per distribution packet
- International discussion on this topic is occurring
- International accession trips are still possible in former Soviet Union republics, and North African countries, other countries are difficult or impossible

### 3. Gary Pederson

- [\*\*PowerPoint\*\*](#)
- GRIN- Global training is occurring and programmers are fixing bugs
- Not ready yet but making progress
- PGOC would like to ask international requestors to pay for sanitary certificate fees directly to APHIS with some consideration for developing countries.
- Would start in 2014 and only apply for samples that go through Beltsville
- PGOC will not meet in 2013 due to budget cuts, next meeting in spring 2014 in Davis, CA
- Distributions so far this year are very high, for S-9 it already equals all of 2011 distributions
- Highlights from each regional collections report are in PowerPoint

4. Ann Marie Thro

- NIFA is getting a lot of inquiries about increasing support of plant variety improvement
- New REE Action Plan includes plant variety improvement in multiple places
- Stakeholder session at ASHS on August 1 in Miami
  - How would you manage awards to support breeding?
  - How to manage lack of competitiveness?
  - Should we document public investment?
  - Should we document demand for public cultivars?
  - What is role of public plant breeders?
- Looking for a novel way of funding plant breeding in a sustainable manner, which is difficult in normal AFRI mechanisms

5. Ed Kaleikau

- [Handout](#)
- AFRI guidelines for grants related to germplasm and variety improvement to include curator in proposal development early

6. Cari

- PowerPoint

7. Tim Cupka - ASTA

- Training and retaining breeders is a huge issue for industry
- Need combination of classical selection and genomic analysis in training and practice
- Hiring more international students so it's harder to retain them
- How can industry help with germplasm distribution?
- Industry is currently subsidizing education of many breeders
- Final draft of Int. Seed Federation documents on intellectual property rights has been released and ASTA supports it.
  - Patents and PVP's require permission from owner for use.
  - No farmer saved seed with patented traits

8. Chavondra Jacobs-Young

- NSTC Interagency Working Group has been established to coordinate work in plant and animal germplasm

9. David Baltensperger - NAPB

- Meeting August 6-8 in Indianapolis
- TAMU is now the accountant for organization and will have official accounting structure
- Highlights of conference
  - International breeding
  - Distance education program for plant breeding
- CSA & NAPB are doing a policy white paper on plant breeding and germplasm

10. NGRAC & NPGCC

- NGRAC has only had one organizational conference call
- Appears that agenda items from NPGCC may be suggested through Peter and Gary

11. Wheat - MTA

- Colorado State, Kansas State, Oklahoma State, Texas A& M University signed original MTA, other states have joined
- ESCOP will post document on web site and keep list of signers
- Some discussion on a master research agreement, but that was too complicated
- Plant breeders are currently reviewing it at 4 universities
- Once it's all finalized it will be put on web
- Participation in regional variety traits used to mean any participant could take germplasm for use, but now they are for testing only
  - They will still continue because they're very important

12. New Chair

- Lee is retiring May 2013, so need to choose chair
- Tom Burr will become chair after fall ESS meeting
- Committee will change chairs every 3 years

13. Ann Marie Thro - Afghanistan

- PowerPoint

14. Next meeting

- Beltsville in June
